

Environmental Impact Assessment

What can Green Element do for you and in particular what are the significant financial benefits that your company can accrue whilst not only being seen to be environmentally responsible, but in reality contributing towards resolving some of the severe problems facing our planet.

I trained as an ISO14001/EMAS auditor at the University of Hertfordshire, obtaining my MSc. Having completed this ISO 14001/EMAS accredited course on auditing within the environment, I have worked for a variety of companies, BP, Liberal Democrats and Veolia, on a number of different projects that have identified areas where these companies can improve their environmental status. Please refer to Green Element's website for more information and projects. There are a number of ways that a company such as yours are able to make "carbon savings".

Green Element built a model that analyses the market structure and project implications of a wind turbine project. This model identifies rate of return, and any other financial implications that are associated with a large wind turbine project. To our knowledge there are very few models of this nature that are readily available on the market. Green Element built it as it helps in the initial steps of a wind turbine project, evaluating the project financially.

If you would like to have a preliminary discussion with Green Element regarding your aspirations for your Company's environmental objectives and green policies, Green Element should be pleased to hear from you.
