Carbon Footprint Report and Science-based Targets for Poole Alcock

Poole Alcock is a leading firm of solicitors providing a broad spectrum of specialist and general legal services throughout the UK. They strive to build strong relationships with their clients, understanding their unique needs and working diligently to address their legal concerns effectively.

Madeleine and the team at Green Element made the daunting process of collating the information needed for our first carbon audit straightforward and easy to follow. They were always on hand to answer any questions and provide further guidance when needed. We really felt we were working in partnership with Madeleine and the team, and this collaborative approach was exactly what we were looking for.

Helen Stoller

Partner, Poole Alcock

> It has been a joy to work with Helen Stoller and Poole Alcock to conduct their first carbon audit and establish their emissions baseline. It is clear that the team at Poole Alcock is committed to their sustainability journey and achieving their environmental goals.

Madeleine Woods
Environmental Management Consultant, **Green Element**

Carbon Footprint Reporting

A fully operational Greenhouse Gas accounting analysis was undertaken for the period April 2021-March 2022. The footprint covered all 11 offices and included various data points. This provided a deeper understanding of the company's carbon hotspots.

Science-based Targets

Emission reduction targets were set in line with the Science Based Target Initiative's SME pathway. This involved setting near-term targets for Scope 1, 2, and 3, and a net-zero target.

Client Benefits

- Fully operational GHG accounting analysis undertaken
- Identified carbon hotspots that informed a emission reduction roadmap
- Set near-term and net-zero science-based targets
- Emission reduction roadmap created as part of a wider ESG strategy
